

Please amend the specification as follows:

Please amend the paragraph beginning on Page 6, line 13 as follows:

“Assuming the least restrictive mode is active, either by system default or by supervisor choice, the system logic first checks whether an override is active 24. If no, then no blocking is imposed 25. If yes 26, then the system then checks for another matching override 27 and, if any, then “gets” it 28, or if not 29 then permits 30 the program.”
